DETAILED ACTION

Drawings

1. Figures 11 and 12 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. The disclosure is objected to because of the following informalities:

The first line of the specification should include the status of the application which is a 371 of PCT/JP02/07513 filed July 24, 2002.

Appropriate correction is required.

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested:

MIX SIGNAL CHIP PACKAGE HAVING GROUND TERMINALS ISOLATED
FROM EACH OTHER.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Tsukada et al. (JP. Patent No. 09-223705) of record.

With respect to claim 1, Tsukada teaches a semiconductor device as claimed including:

a semiconductor integrated circuit (1) having a first functional block (4) and a second functional block (5);

a package (100) for storing the semiconductor integrated circuit (1) therein; and

a ground terminal (2) and signal terminals (8a) exposed to the outside of the package (100), the ground terminal (2) including first (2a) and second (2b) ground terminals isolated from each other,

the signal terminals (8a) including a plurality of first signal terminals (8a) arranged around the ground terminal (2),

the first ground terminal (2b) being electrically connected to the first functional block (4), the second ground terminal (2a) being electrically connected to the second functional block (5). (See Figs. 4, 6).

With respect to claim 2, the second ground terminal (2) surrounds said first ground terminal. (See Fig. 6).

Art Unit: 2814

Allowable Subject Matter

4. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter: prior art of record fails to teach a semiconductor device in the combination of the limitations as claimed including: the signal terminal include a second set of signal terminal and the second ground terminal further surrounds the set of second signal terminal (as shown in the embodiment of Figs. 8 and 9).
